Our work is someone’s hope.
Join us.

MRL Epidemiology - Improving research to assess patient outcomes. Our mission is the scientific study of disease, endpoints and patient outcomes to evaluate the benefits and risks of our products. At Merck, we pride ourselves on meeting patient expectations – leveraging the most complete data and a strong cohesive effort to the make the products that make life better.

Our Epidemiology Department represents that kind of diligence, establishing safety and efficacy claims through innovative approaches to medical development. We provide epidemiologic and outcomes research for all Merck drugs and vaccines. Using existing information, database analyses and conducting epidemiology studies across the globe, we characterize disease natural history for new therapeutic areas, assist in clinical trial design based on the epidemiology of the disease, link biomarkers to outcomes and help understand the safety of our products pre- and post-launch. Our team is an active member of clinical development and outcomes research teams.

Merck is a global research-driven pharmaceutical company dedicated to putting patients first in all we do. That philosophy was first articulated by George Merck and it still guides us today. Join our Epidemiology Department and participate in our investigative design and interpretation that enable us to bring life-enhancing products to market. Visit merck.com/careers to find out how.

Merck is an equal opportunity employer, M/F/D/V – proudly embracing diversity in all of its manifestations.

Cutting edge epidemiology contributing to the discovery and development of safe and effective medicines

We are a global team of epidemiologists and other professionals that bring population-based evidence on disease and treatment to influence decision-making from drug discovery through development to medical practice. By designing, analyzing, and interpreting observational information from a public health perspective we play an important role in bringing new medicines to the market. The breadth of our responsibilities includes:

• Analyzing the occurrence and distribution of diseases, including underlying disease process
• Determining the burden of illness and unmet medical need
• Exploring traditional and new risk factors for diseases
• Evaluating the effect of treatment in the real world, including beneficial effects, patterns of drug uses and adverse events
• Detecting opportunities for possible new drug uses and new paths of drug development

Please visit our website at http://epidemiology.gsk.com/organization.html to find out more detailed information about Worldwide Epidemiology at GlaxoSmithKline.

HOT TOPICS SESSION

Pharmaceutical Risk Management in a Generic Rich Environment

• Hubert GM Leufkens, FISPE, Chair
• June Raine, MHRA/EMEA
• Andrew Fox, Amgen
• Allen A. Mitchell, FISPE
• Colin D’Cunha, Apotex, Inc.

Who is responsible or ‘owns’ a safety issue in a generic rich market, particularly in the context of individual drug risks versus class effects?

Are producers of generic pharmaceuticals providing enough funding for research on questions related to drug safety?

What about harmonization of safety sections of SmPCs and other information sources?

Who takes responsibility for risk management programs when generics enter the market, e.g. isotretinoin and teratogenicity prevention?

How to handle inappropriate linkage of generic drug related safety issue to innovator products, e.g. in case of biosimilars.
